

DANGEROUS GOODS IN BAGGAGE

GENERAL INFORMATIONS

It is forbidden to transport any chemical, toxic, explosive material... that could be hazardous to your health and your properties and those of other passengers and crew or the safety of the plane.

You will find below a non-exhaustive list of prohibited items on board, in cabin or in hold and those that require prior approval of ASL AIRLINES France.

ATTENTION: dangerous goods permitted for example in luggage placed in the hold, may be prohibited in luggage placed in the cabin, and vice versa.

ANY DANGEROUS GOODS, NOT EXPRESSLY AUTHORIZED, IS PROHIBITED, BY DEFAULT, IN LUGGAGE OR ON THEPASSENGER HIMSELF.

In cases of prohibition of dangerous goods in baggage or on the passenger himself, these dangerous goods (or object and equipment containing it) will eventually be shipped as cargo under certain conditions. It is then necessary to contact a broker or freight forwarder to verify that the shipment is actually possible and know the steps and associated conditions

WARNING: the sending by post of dangerous goods is strictly prohibited.

For any questions about dangerous goods in baggage, contact infovoyagefr@aslairlines.com.

PROHIBITED GOODS ON BOARD

Non exhaustive list

- **Acids and alkalis**, e.g. 'wet' batteries that are leaking, caustic soda.
- **Aerosols for cosmetic use, sporting or home with a capacity of 500 mL.**
- **Aerosols or stun devices, stun, neutralizing agents**, e.g. pepper spray, tear gas, mace, etc.
- **Matches, lighters and lighter fuel**, except safety matches (one small packet) or a small cigarette lighter carried on the person (**FORBIDDEN IN BAGGAGE**).
- **Self-balancing devices or appliances to move using a lithium battery**, such as unicycles, segways, hover board, Solo wheel, scooters, skateboard ... with or without battery.

Examples of Self balancing devices

- **Firearms**, of defense, war, fair shooting, lounge..., **grenades, dummy ammunition, pistols or rifles of all kinds**, except for hunting or sporting rifles that are subject to prior agreement. Contact the airline.
- **Electro shock weapons** (e.g. Tasers) containing dangerous goods such as explosives, compressed gases, lithium batteries, etc.
- **Toiletry articles of more than 500 g or 500 mL**
- **Lithium batteries with a Watt-hour rating exceeding 160 Wh.** See below for specific requirements for lithium batteries.
- **Batteries with electrolyte** except for some mobility aids (see electric wheelchair).
- **Alcoholic beverages** containing more than 70% alcohol by volume.
- **Dive Tanks containing oxygen.**
- **Bottle for camping stove.**
- **Flammable liquid fuel**, e.g. petrol, diesel, lighter fuel, alcohol, ethanol.
- **Cartridges or toner printers.**
- **Explosives, detonators, primers and explosive devices, mines and other military explosive devices, ammunition** unless the ammunition for hunting or sport which are subject to prior agreement. Contact ASL AIRLINES France.
- **Fire extinguishers.**

- **Gases and gas cylinders**, e.g. butane, propane, acetylene, oxygen in large volumes.
- **Flammable liquids**, e.g. fuel, thinner, solvent, acetone.
- **Security-type attaché cases, cash boxes, cash bags**, etc. incorporating dangerous goods, such as lithium batteries and/or pyrotechnic material.
- **Materials that can catch fire or capable of spontaneous combustion**, e.g. phosphorus.
- **Toxic materials, infectious or biologically hazardous**, e.g. arsenic, infected blood, bacteria and viruses.
- **Radioactive material**, e.g. medicinal or commercial isotopes.
- **Liquid Oxygen.**
- **Firecrackers, fireworks or flares** in any form.
- **Paint, varnish, lacquer, turpentine and paint thinner.**
- **Chemicals**, e.g. fertilizers, herbicides, insecticides, pesticides.
- **Corrosive or bleaching substances**, e.g. mercury, chlorine bleach.

PROHIBITED GOODS IN CARRY-ON BAGGAGE

- **Aerosols for cosmetic use beyond 100 mL.**
- **Sporting or home aerosol.**
- **Mobility Aids: Battery-powered wheelchairs or other similar mobility device**
- **Sporting equipment** : tennis racket, baseball bat, cricket bat, hockey stick, leather ball, pool cue, fishing pole, golf club, hockey stick, paddle, martial arts equipment (e.g. protection of finger joints, hockey sticks, flails, nun chucks...), rigid and flexible stick (e.g. batons...), skateboard, scooter...
- **Cartridges and ammunition for hunting and sport rifles.**
- **Blunt work tools** including sledgehammer, hammer, chisel, screwdriver...
- **Perfume bottle and liquid products exceeding 100 mL.**
- **Blades and any sharp, blunt, metallic or non-metallic items that may be used as weapons** (e.g. knife, nail scissors, razor blades, sabre, sword, leaded cane, crossbow, archery equipment, etc.)

PROHIBITED GOODS IN CHECKED BAGGAGE

- **Lithium batteries that can be removed from an electric wheelchair or similar mobility aid.**
- **E-cigarettes and batteries** (use or charge an electronic cigarette is strictly prohibited on board our aircraft).
- **Mercury filled thermometer or barometer, carried by a representative of a government weather bureau or similar official agency.** *A small mercury fever thermometer for personal use is permitted in checked or carry-on baggage provided it is kept in its protective case.*
- **Any spare battery.**
- **Underwater torches (diving lamps).**

CONDITIONS FOR TRANSPORTATION OF LITHIUM BATTERIES AND CELLS IN BAGGAGE

Lithium batteries equip many portable electronic devices (computers, mobile phones, DVD players, medical equipment...) In case of short circuit, lithium (ion or metal) batteries can produce a lot of heat, or can catch fire if they are damaged, subjected to a shock (a fall for example), poorly designed or assembled.

The lithium batteries and lithium cells must be transported in accordance with the instructions given below to prevent danger to yourself and other passengers.

The lithium batteries are classified into 3 categories according to their energy calculated in Watt/hour, abbreviated Wh, for lithium ion or lithium polymer batteries and their quantity in grams, abbreviated g, for lithium metal batteries

Examples of portable electronic devices (not exhaustive list)	Category	Energy(Wh)/ Quantity (g)	prior Company approval	Carry-on Baggage	Checked Baggage
Consumer electronic devices containing small lithium batteries, such as audio players , calculators, camcorders, cameras , mobile phones, laptops, tablets , small power tools ...	Batteries contained in a device	≤ 100 Wh ≤ 2 g	NOT REQUIRED	YES	YES
	Spare Batteries (including Power Bank type external chargers) (see note 1 below)			YES Limited quantity for personal use	NO
Medical devices and other devices , automatic external defibrillators (AED) , nebulizers, portable oxygen concentrators (POC), continuous positive airway pressure (CPAP) , video cameras, power tools , drones ...	Batteries contained in a device	> 100 Wh and ≤ 160 Wh > 2 g and ≤ 8 g	REQUIRED	YES in preference	YES
	Spare Batteries (including Power Bank type external chargers) (see note 1 below)			YES 2 per person maximum	NO
Wheelchairs/Mobility Aids with lithium batteries (for use by passengers whose mobility is reduced) (see note 1 below)	Wheelchair with 1 battery	≤ 300 Wh	REQUIRED	NO	YES
	Wheelchair with 2 batteries	≤ 160 Wh per battery			
	Spare batteries for Wheelchair (see note 1 below)	≤ 300 Wh or ≤ 160 Wh for 2 batteries		YES	NO
Small lithium battery-powered vehicles such as air wheel, solo wheel, hover board, mini-segway, balance wheel, scooters, skateboard...			PROHIBITED IN BAGGAGE TRANSPORT BY FREIGHT ONLY		
Large batteries for industrial devices, vehicles, Mobility Aids...		> 160 Wh > 2 8 g	PROHIBITED IN BAGGAGE TRANSPORT BY FREIGHT ONLY		

Notes

- (1) Lithium Spare battery terminals must be individually protected so as to prevent short-circuit by placement in original retail packaging or by otherwise insulating terminals, e.g. by taping over exposed terminals or placing each battery in a separate plastic bag or protective pouch.
- (2) If the energy is not indicated on the battery or the cell, you can calculate it by multiplying the voltage (V) by the electrical current (Ah). Example: 2.5V x 4Ah = 10 Ah Wh.

Special conditions apply to electric wheelchairs (including those powered by lithium batteries). See below requirements for electric wheelchairs

CONDITIONS FOR TRANSPORT ELECTRIC WHEELCHAIR

Transporting electric wheelchair is subject to prior approval by ASL AIRLINES France

We recommend you to report your transportation request no later than 72 hours (3 days) before your flight to check whether the characteristics of your wheelchair allow it to be transported safely.

For electric wheelchairs with wet batteries, you must contact the company at least 96 hours before your flight.

Contact infovoyagefr@aslairlines.com

Your wheelchair must be registered as checked baggage.

Upon arrival, your wheelchair will be returned upon delivery of baggage.

There are 3 types of powered wheelchairs according to the type of batteries

Lithium battery-powered wheelchairs

- The energy of the battery must not exceed 300 Wh or 160 Wh in case of two batteries.
- The terminals of the battery needs to be protected against short-circuits.
- If the battery or batteries are removable , they must be :
 - withdrawn from the chair ,
 - isolated against short circuits by covering the exposed terminals with tape or placing each battery in a plastic bag or a separate protective sleeve and
 - carried in cabin

Battery-powered wheelchairs with spillable batteries (also called “dry batteries”):

- The battery may remain attached to the wheelchair or similar mobility device if it is well affixed.
- The terminals need not be disconnected if they are already inside of a cell case or isolated (to avoid any short circuits).
- The motor is disengaged.

Battery-powered wheelchairs with non-spillable wet batteries (also called “wet batteries”):

Because these batteries can compromise the safety of the flight, their transport requires special precautions and will be refused on board if preliminary information is not provided. Contact ASL Airlines France (or your travel agent) to know their transport conditions at the latest 96 hours (4 days) before your flight.

DANGEROUS GOODS REQUIRING PRIOR APPROVAL OF AIRLINES FRANCE ASL.

Contact infovoyagefr@aslairlines.com, your travel agent or tour operator who will contact the company at least 72 hours before your trip (at least 96 hours for electric wheelchairs with wet batteries).

In the absence of approval by ASL AIRLINES France, your registration will be delayed and we will not accept to transport the items listed below.

- **Mobility aids:** Electric wheelchairs or other similar means of movement equipped with liquid electrolyte battery or lithium ion battery

Note: Small lithium battery-powered vehicles such as air wheel, solo wheel, hover board, mini-segway, balance wheel, scooters, skateboard... with or without battery, are not mobility aids and are not accepted in checked baggage or cabin by ASL AIRLINES France, regardless of their energy (Wh).

- **Electronic devices powered by lithium batteries.** For portable electronic devices (including medical electronics), lithium ion batteries of which the power to watt hours is between 100 Wh and 160 Wh. For portable medical electronic devices only, lithium metal of which the lithium content is between 2 g and 8 g.
- **Medical oxygen.**
- **Camping stoves and fuel container that have contained a flammable liquid fuel** of which the fuel tank and/or the fuel container is empty.
- **Carbon Dioxide, Solid (dry ice)** used to pack perishables.
- **Avalanche Rescue Backpack containing cartridge of non-flammable, non-toxic compressed gas.**
- **Ammunitions (cartridge for weapons, small arms) and hunting and sport rifles.**
- **Heat producing articles** such as underwater high intensity lamps and soldering irons.
- **Small non-flammable gas cartridges fitted into a self-inflating safety devices** such as a life-jacket.
- **A mercurial barometer or a mercurial thermometer carried by a representative of a government weather bureau or similar official agency.**

INFORMATIONS FOR DIABETICS

For more information, refer to the guide produced by the Association Française des Diabétiques in collaboration with the French Civil Aviation Authority: [Diabète à l'aéroport](#) (in French).
